Sliding Door Brochure

The DNA Products Sliding Chill doors can be manufactured with various blade thickness ranging from 60mm, 80mm and 100mm, depending on the temperature and customer specification.

The door blades are manufactured using a PIR core with a white food-safe laminate coating, capped with silver anodised aluminium section with all fixings hidden.

All doors are manufactured to size, to suit customers exact requirements.

We are here for you from order, to installation and available for after sales service.

These doors can also be supplied with a split track for meat rails which are suitable for abattoirs and meat processing factories.

Available in two versions

You can choose from two versions of door:

Manually Operated (STANDARD)

Automatic Operation (SEE OUR UNIVERSAL AUTO-KIT BROCHURE)

Design

Frame: Silver anodised aluminium thermal broken wrap around frame section to suit various panel thickness from 50mm to 300mm.

Colours: All doors are white food-safe as standard.

Insulating: Injected polyurethane to a density of 42Kg/m³. Food safe panels used for the door leaf.

Sealing: All doors have a food-safe Neoprene perimeter gasket to three sides of the door blade and a sweeper gasket at the bottom for efficient sealing.

Furniture: All doors are fitted with furniture as standard including Internal Handle, External Handle and Sliding Rail system. A set of Floor Guides is also supplied.

Wall mounted Guides and Guide Rail are available upon request.

Application

Cold-rooms

Freezer rooms

Food Processing Industries

Retail storeroom facilities

Modular freezer / Cold-rooms

Options

Rails: We offer different Sliding Rail Systems to suit your needs and also a Fire Rated option upon request.

Material: As an extra you can upgrade to a stainless steel Sliding Rail System.

Protection: Protective Kick Plates in aluminium or stainless-steel can be added upon request.

Lock: A lock is not included as standard but can be supplied if necessary.

Freezer: Low Voltage Heater Cable and Transformer for Freezer Doors.

Special: Should you have an overhead track running from one room to another, upon request, we can add this feature.

Automation: A DNA Products Auto Kit can be installed for automatic operation. This can be purchased and installed at a later date if required.

Service and Maintenance

A door with worn gaskets can be very costly when trying to keep a room at a low temperature. We can service all types of Sliding, Hinged, Steel and High-Speed Doors, Roller Shutters and Sectional Doors to prevent these extra and unnecessary costs. We can replace Gaskets, Guide Rails, Handles, Locks, Hinges, Rollers and much more.

We can modify existing doors with upgrades like protective Kick Plates to prevent damage to your door leaf. We can also fit new heaters to Sliding and Hinged doors in a freezer environment.

We can service or replace your Sliding Rail. Some of these can have bearings that wear over time. We can replace damaged door leaves or supply an entirely new door complete with frame if needed.

Damaged Gasket due to heater being turned off and door leaf freezing up

Sliding door damaged by impact

Impact Damage

Doors do not fail simply because of wear and tear. Quite often we are called to site after a collision with a Forklift Truck or a wagon has led to severe damage of a door or loading bay area. Quite often this damage can prevent the door or dock leveller etc. from working properly. We can assess the safety of the existing products while taking measurements for replacement parts. We will try to match the colour of the existing products or the surrounding area if it is colour coded.
